PROFILE SUMMARY

Full-stack and AI software engineer with 3+ years of experience shipping end to end: enterprise API integrations on-site at a leading private-sector bank (Layer7, FLEXCUBE, Kubernetes), live websites for freelance clients, and an LLM agent that diagnoses Kong Gateway through a custom MCP server. Hands-on across TypeScript, React, Next.js, Node.js, Python, Kong, Apigee and Docker; now deepening Data Science / ML through the Codebasics bootcamp.

TECHNICAL SKILLS

AI & Agentic Systems: MCP, LLM apps & AI agents, tool-contract & agent-loop design, context management, LLM evaluation
Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Node.js, React Native, Redux, Python, C++
APIs & Integration: REST, SOAP, GraphQL, OAuth 2.0/JWT, Kong, Broadcom (CA) Layer7, Apigee, Oracle WebLogic, Postman
Cloud & DevOps: Docker, Kubernetes, Docker Compose, Git/GitHub, CI/CD, Google Cloud Platform, Cloudflare R2, Vercel, Linux
Databases & CMS: PostgreSQL, Supabase, SQL Server, MongoDB, Firebase, DynamoDB, Sanity CMS
Platforms & Testing: Oracle FLEXCUBE (core banking), Shopify; Vitest, unit/integration/E2E testing
Data & ML (in progress): Pandas, NumPy, Scikit-learn, SQL, EDA, Matplotlib/Seaborn

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer · Mumbai — *Mar 2026 – Present*

- **Stans Buildtech** stansbuildtech.com — Built the site and full backend for a Mumbai real estate developer in Next.js and TypeScript: enquiry and careers APIs on PostgreSQL (moved from Docker to Supabase) and Cloudflare R2 storage.
- **Proximo** proximoshirts.com — Launched a Shopify storefront for a D2C menswear brand on a customised theme.

Associate Consultant · Allied Globetech, Mumbai — *May 2025 – Feb 2026*

- Integrated enterprise API gateways (Kong, CA Layer7, Apigee) across 3+ client projects, standardising authentication and cutting integration setup time for new services.
- Worked on-site at a leading private-sector bank (client under NDA) on Broadcom Layer7 API integration around the Oracle FLEXCUBE core-banking platform, using Docker, Kubernetes and SQL.
- Delivered Oracle WebLogic integration services, exposing and consuming REST and SOAP APIs (client under NDA).
- Built React/TypeScript/MongoDB reporting dashboards with real-time KPI visibility, replacing manual spreadsheets.

Software Developer · Take Solutions, Mumbai — *Feb 2023 – Apr 2025*

- Built and shipped scalable web applications end-to-end, from UI/UX prototypes to production deployment.
- Designed and consumed REST APIs powering core application features across frontend and backend.
- Worked in full Agile delivery cycles with sprint planning, automated testing, and CI/CD-based deployments.

AI ENGINEERING

Kong AI Gateway Diagnostics — *TypeScript, MCP SDK v2, Kong 3.9, Docker, Zod, Vitest, Gemini API* GitHub — *2026*

- Built an MCP server exposing Kong Gateway diagnostics as 14 read-only, schema-validated tools, letting an LLM agent investigate misrouted services, authentication gaps, and unhealthy upstreams against a live gateway.
- Separated fact from inference: a deterministic rule engine (11 rules, ~64 ms, no model) produces every finding while the model only sequences tools — catching all 10 seeded defects with no false positive on the healthy control.
- Made the server read-only by construction: no write methods, gated write tools, credentials stripped at five boundaries.
- Built a 28-case evaluation harness with a deterministic scorer (no LLM judge), passing 28/28 at $0.0053 per case; 170 automated tests and 12 documented failure modes with root cause and fix.

PROJECTS

Food Delivery App (Deliveroo-style) — *React Native, Redux, Google Maps, Sanity.io, AWS Amplify* GitHub

- Cross-platform mobile app with real-time map tracking, basket and order flow, and a headless CMS backend.

Streaming Platform (Netflix-style) — *Next.js, TypeScript, Firebase Auth, Stripe, TailwindCSS* GitHub

- Subscription-based streaming UI with Firebase authentication, Stripe billing, and server-side rendering.

Hospitality & Expense Data Analysis — *Python, Pandas, Matplotlib, Seaborn* GitHub

- End-to-end EDA (Codebasics bootcamp): cleaned raw datasets and visualised occupancy, revenue, and spending trends.

EDUCATION

B.Sc. Information Technology — Mumbai University — 2020 – 2023
Data Science Foundation Bootcamp + Virtual Internship — Codebasics — Ongoing
